Monitor Estadístico de Ventas de Inmuebles

Notas metodológicas

1.- Todos los índices reportados en este informe reflejan ventas efectivamente realizadas en cada mes calendario, independientemente de si las unidades vendidas fueron escrituradas o no, lo que permite medir en tiempo real la evolución de las ventas de los desarrollistas cordobeses, sin los rezagos propios de los índices basados en escrituras.

2.- La información utilizada para la elaboración de los distintos índices es reportada por las empresas socias de CEDUC mediante formularios electrónicos auto-administrados a través de un esquema de triangulación de correos electrónicos que permite garantizar la confidencialidad de los datos reportados ya que no es posible detectar a qué empresa corresponde cada dato individual.

3.- Los índices del Monitor de Ventas de Inmuebles en Córdoba están calculados en unidades homogéneas, lo que permite consolidar diferentes tipologías de inmuebles. En el caso de departamentos (de uno, dos y tres dormitorios), casas y cocheras, la unidad homogénea es la cantidad de metros cuadrados promedio por tipología. Y en el caso de lotes, tanto en barrios abiertos como en barrios cerrados, la unidad homogénea es el valor promedio de los lotes expresado en su equivalente en metros cuadrados de construcción.

4.- El cálculo de los índices ajusta por la eventual diferencia en la cantidad de respondientes entre mediciones, por ejemplo, por incorporación de nuevas empresas o falta de respuesta de alguna de ellas, para evitar variaciones que no se deban a los movimientos de mercado que se desea captar.

5.- Las series desestacionalizadas se obtuvieron aplicando el método econométrico X-11 ARIMA multiplicativo, con algoritmo escrito por Economic Trends en lenguaje de programación PYTHON.
